Testimonial

"Anne-Marie provided valued testing and verification expertise to a number of companies in IItem3's portfolio. Her efforts resulted in significant improvements in product assurance and market readiness, and were appreciated by the developers as well as the management."

Geoff Bowker
Director, Investments, IItem3

TESTING TIMES Your true test of quality

Established in 1998 by professional tester Anne-Marie Charrett, Testing Times is an independent software testing service that delivers proven, personal and cost-effective software testing services.

Why use Testing Times?

- ✓ ROI - improve your software quality without the burden of full time testing resources by having an expert test team on call
- ✓ Flexibility - fixed testing packages or by the hour services can be tailored to meet your specific project demands
- ✓ Independent - receive an outside viewpoint on your software before releasing it to customers
- ✓ Tested facts - gain tangible knowledge on application performance and features that can be used for advertising, benchmarking and future design improvements
- ✓ Experience - benefit from our proven and practical knowledge of software testing methods, without the costs of large testing solutions
- ✓ Technical expertise - skills range from telecommunications (networks, billing and CRM) and finance to imaging, databases and shrink wrapped software

Testimonial

"Anne-Marie's work in creating and improving the test methodology and templates used by Cuscal's IT department was of a high standard. Her expertise, flexibility and pragmatism were valuable assets in getting the job done. Anne-Marie also related well to staff and management. I am happy to recommend Anne-Marie"

PERSONAL SERVICE from start to finish

With more than 16 years in the industry, Anne-Marie Charrett has established a reputation as a leader in the field of software testing. She began Testing Times in 1998 to offer a personalised, high-calibre testing service to corporates and smaller businesses.

An academic grounding in electronic engineering has given her the benefit of a structured approach and analytical skills. She learnt her trade with the best, working for companies such as Nortel and IBM improving her skills and acquiring knowledge on best practices in software development and testing.
