### FIRE AND EMERGENCY

You are here: [Wormald Australia](#) > [Industry Capabilities](#) > [Fire and Emergency](#)

#### Keeping you safe, while helping others

In order to work towards providing the best possible assistance, you must maintain a maximum level of operational preparedness of staff and fire and rescue equipment. Fire and rescue groups heavily rely on specialised equipment to help meet the needs of the community it serves.

Across Australia, ambulance officers, State Emergency Service (SES) volunteers and rural and metro fire-fighters are all renowned for saving the lives of others. Aside from the obvious incidents that these people tend to, such as bush fires and car accidents, they also provide a vast range of other fire and emergency services including: chemical and hazardous material management, scene investigations, floodwater incidents, confined space accidents, trench/construction accidents, building collapses, earthquakes and much more.

Whether it is [breathing apparatus](#), [thermal imaging](#), [gas detection - portable](#) or [portable and area lighting](#), Wormald has got you covered.

Below is a list of products that we offer that can ideally be used for the Fire and Emergency Services industries. Click on any of the product names for more details.
